

PRODUCT SPECIFICATION SHEET

Side Shift Drum Palletiser

- The Side Shift Drum Palletiser is specially designed for moving drums and barrels from any position on a pallet.
- It uses a sliding side-shift arrangement allowing it to even be used for moving containers and drums placed in the centre of a pallet.
- The palletiser straddles the pallet and only requires access to one side, thus allowing pallets in confined areas to be kept against the wall even when unloading.
- When moving the drum onto another pallet, scales or the floor, the drum can also be moved to either side using the side-shift arrangement
- This unique design side shift drum palletiser can pickup drums from any position on the pallet, skid or bund -straddles beside and over the pallet
- Suitable for both steel and plastic drums
- The operator requires only 12kg of force on the handle to lift a 300kg drum

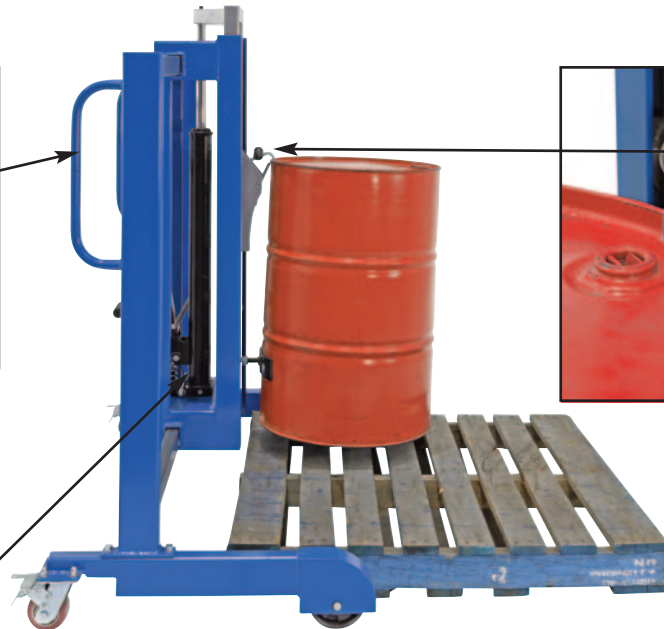

Handle lever to lower drum

Spring loaded clamp to securely hold the drum

Foot pedal to raise drum
